

AMF Explorer 0.7

Posted At : March 23, 2011 9:11 PM | Posted By : Nathan Mische

Related Categories: Tools, AMF Explorer

AMF Explorer has been updated to work with Firefox 4 and Firebug 1.7. In the process I also added the ability to copy the AMF data to the clipboard in JSON format.

The screenshot displays the AMF Explorer interface within a Firefox browser window. The main panel shows a network request to 'flex2gateway' on 'mischefamily.com' with a 200 OK status and 288 B of data. The response is an AMF message with the following structure:

```
[ Object { targetURI="null", responseURI="/2", data=[1] } ]
Object { targetURI="null", responseURI="/2", data=[1] }
[ Object { className="flex.messaging.messages.RemotingMessage", more... } ]
"/2"
>null"
[ ]
3
```

The interface includes tabs for Headers, Post, Response, AMF Request, and AMF Response. A 'Copy To Clipboard' button is visible at the bottom left of the response area. The status bar at the bottom indicates 7 requests, 356.1 KB (355.5 KB from cache), and a total time of 479ms (onload: 175ms).

The new version is awaiting review on the AMO site, but if you want to get it now you can install it from here:
